

Asaya × GlamAR — Recommendation Engine PRD

Final Screen Product Recommendations | AI Skin Analysis Flow

Owner: Jay Karia (GlamAR)

For: Asaya product, content, and tech team

Status: v1 — Draft for review

Repo: <https://github.com/imjaykariaa/skin-analysis-demo-asaya>

1. Context & Positioning

Asaya is a **hyperpigmentation-led skincare brand**. Every recommendation surfaced at the end of the AI Skin Analysis must reinforce this positioning. The AI scan detects 14+ parameters, but the recommendation engine must always anchor the routine in a product from the [Hyperpigmentation collection](#), even when the user's primary scan concern is acne, dullness, or scars — because all of those concerns either cause or compound pigmentation in melanin-rich skin.

Core principle:

No matter what the AI detects, the routine sells the user one truth — "Asaya solves pigmentation, in every form, on every part of the body."

2. Objectives

1. Build a clickable, scientifically-defensible routine that the user trusts.
 2. **Always lead with a hyperpigmentation hero product** as the primary recommendation.
 3. Surface **body-specific SKUs** (underarm, knee/neck/elbow, inner thigh, face) when the conversation extends past the face.
 4. Prefer **Routine Sets** over individual SKUs whenever 2+ concerns are detected — higher AOV, simpler decision.
 5. Filter out SKUs that conflict with the user's skin type (e.g. no salicylic acid for dry/sensitive).
-

3. Inputs to the Engine

Source	What it provides
AI Skin Scan (GlamAR SDK)	Score basics: Overall Skin Score, Skin Type, Skin Tone, Skin Age. Key Conditions: Acne, Wrinkles, Pores. Eye Area: Eye Bags, Dark Circles. Specific Issues: Post Acne Scars, Whiteheads, Pigmentation, Hydration. <i>(8 concerns scored 0–100. Melasma is NOT detected — it is inferred from quiz only.)</i>
Quiz answers	Gender, pregnancy status, self-reported skin type, top goal (Fade pigmentation / Reduce acne / Hydration / Anti-ageing / Maintenance), breakout frequency, + new "Beyond the Face" question (§3.A) .

⚠ **Reality check:** Many users (especially those with Asaya's target demographic) will have their **top 3 concerns score in the 60–80 range across Pores, Hydration, Wrinkles, or Acne** — none of which directly map to the Hyperpigmentation collection. In those cases the engine **MUST fall back to the bestseller pigmentation routine** (§6.A) so the user always sees an on-brand Asaya recommendation. We never want a user to leave screen 6 without a clear hyperpigmentation-first routine to buy.

3.A New Quiz Question: "Beyond the Face"

Add this as the **final question in the quiz** (after acne frequency). It's the only input to the Body Extra slot on the routine screen.

Question: "Beyond your face, what's the one area you'd love to brighten?"
Asaya's body-care range tackles pigmentation head-to-toe.

Options (single-select):

- 💖 **Dark underarms** → Even Tone Underarm Mist (Asaya's #1 bestseller)
- 🦶 **Dark knees, neck & elbows** → Tone Restore Knee-Neck-Elbow Cream
- 🍑 **Bikini line & inner thighs** → Face Forward (SKU TBC by Asaya)
- ⚡ **Just my face for now** → Default to Even Tone Underarm Mist as an upsell (bestseller-led)

Why single-select: users won't read or commit to multi-select on mobile. One clear pick = one clear add-to-cart card. Higher attach rate.

Why we default to Underarm Mist if user skips: it's the brand's #1 best-seller; even non-buyers will see it as social proof. The card label changes from "Recommended for your dark underarms" → "Asaya's #1 bestseller — try it on your underarms."

4. Concern → Product Category Map

The scan returns 8 concern scores 0–100. Lower = more severe. **A concern is "active" when its score is below the threshold below.** We classify each concern as either **Pigmentation-family (on-brand)** or **Adjacent (still solvable with Asaya, but not the hero category).**

#	Detected Concern	Threshold	Family	Primary Job	Asaya SKU
1	Pigmentation	<70	 Pigmentation	Brightening serum + corrective SPF	Advanced Spot Targeting Serum + Spot Light SPF
2	Post Acne Scars	<70	 Pigmentation	Niacinamide + Alpha Arbutin serum + Spot Gel	10% Niacinamide & 1% Alpha Arbutin Serum + Advanced Spot Targeting Gel
3	Dark Circles	<65	 Pigmentation	Multi-Peptide serum + SPF	5% Multi Peptide & HA Serum + Spot Light SPF
4	Acne	<70	 Adjacent	Salicylic cleanser + spot gel + oil-free moisturizer	Salicylic Cleanser + Advanced Spot Targeting Gel + Oil-Free Barrier+ Crème
5	Whiteheads	<70	 Adjacent	Salicylic serum + cleanser	2% Salicylic Acid & 5% Niacinamide Serum + Salicylic Cleanser
6	Pores	<75	 Adjacent	10% Niacinamide + 1% Alpha Arbutin Serum	10% Niacinamide & 1% Alpha Arbutin Serum
7	Hydration	<60	 Neutral	Hydrating moisturizer + HA serum	Intense Moisture Gel + 5% Multi Peptide & HA Serum
8	Wrinkles	<70	 Neutral	Multi Peptide serum + night cream	5% Multi Peptide & HA Serum + Overnight Revive Crème
9	Eye Bags	<70	 Neutral	(No targeted Asaya SKU — Multi Peptide as proxy)	5% Multi Peptide & HA Serum

Family rules:

-  **Pigmentation family** — top 3 concerns include at least one of these → use scan-driven routine (§6.B).
-  **Adjacent** — top 3 are all adjacent → still build a routine, but **inject the Hero Serum (Advanced Spot Targeting Serum) as the upsell** card on top.
-  **Neutral / no pigmentation flag at all** — fire the **Bestseller Fallback Routine** (§6.A).

5. Skin-Type Filter (Hard Gate)

Each SKU in the catalogue has a Yes/No flag for Oily, Dry, Normal, Combination, Sensitive, Acne-prone (per the spreadsheet). The engine **must drop** any SKU where the user's skin type = **No**.

Hard exclusions to enforce in code:

- **Dry skin** → exclude Salicylic Face Cleanser, Spot Light SPF, Sheer Milk SPF, Oil-Free Barrier+ Crème, Even Evermore Crème, Glow & Lift Crème, Overnight Revive Crème
- **Sensitive skin** → exclude Sheerscreen Mist, Sheer Milk Sunscreen, Aqua Dew Sunscreen, Intense Moisture Gel, 10% Vit C Serum, Moisture Cocoon, Salicylic Cleanser, 10% Niacinamide+AA, Salicylic Serum
- **Pregnant / postpartum** (from quiz) → exclude any serum containing **Salicylic Acid, Kojic Acid, or Retinoids**. Show the existing care banner. Default the brightening hero to **Radiance Serum** instead of Kojic Acid + Alpha Arbutin.

6. Routine Construction Logic

The final screen always renders a **4-step AM + 3-step PM routine**, plus optional body extras. The routine source depends on whether the scan turned up any pigmentation-family concerns.

6.0 Master Decision Flow

Bottom line: the Bestseller Fallback (§6.A) is the **default** unless the scan explicitly returns a pigmentation-family concern in the top 3. This guarantees every user leaves screen 6 with a routine — even when the AI says "your skin is great" or detects only Hydration + Wrinkles + Pores.

6.A 🌟 Bestseller Fallback Routine (*default — always on-brand*)

Use this when no pigmentation concern is flagged, OR when the user's scan is "all green / good." This is **Asaya's hero starter routine** — the one a customer would buy if they walked into a store and said "give

me your bestselling pigmentation set."

Step	SKU	Why
AM 1. Cleanse	Even Tone Face Cleanser	Daily brightening cleanser — universally compatible
AM 2. Treat ★	Advanced Spot Targeting Serum	Asaya's #1 face serum, hero of the hyperpigmentation collection — works as prevention even without active pigmentation
AM 3. Moisturize	Glow & Lift Crème	All-skin-types peptide moisturizer
AM 4. Protect	Spot Light Sunscreen SPF 50	Best-selling SPF in the hyperpigmentation category. Pigmentation prevention is the brand promise.
PM 1. Cleanse	Even Tone Face Cleanser	Repeat
PM 2. Treat	5% Multi Peptide & HA Serum	Hydration + collagen, complements AM serum
PM 3. Repair	Overnight Revive Crème	Night repair

Always pin the Underarm Mist as an upsell card at the bottom: *"Pair with Asaya's #1 best-seller — Even Tone Underarm Mist."*

6.B Scan-Driven Routine (*when pigmentation-family concern detected*)

Builds the same 4+3 scaffold but replaces specific slots based on the user's scan:

Step	Default	Replace with...	When
AM 1. Cleanse	Even Tone Face Cleanser	Salicylic Face Cleanser	Acne <50 AND skin ≠ Dry/Sensitive
AM 2. Treat (Hero)	<i>from §7 decision tree</i>	—	—
AM 3. Moisturize	Glow & Lift Crème	Oil-Free Barrier+ Crème	Oily/Acne-prone
AM 3. Moisturize	Glow & Lift Crème	Intense Moisture Gel	Hydration <60 AND skin ≠ Sensitive
AM 4. Protect	Spot Light Sunscreen	Aqua Dew Sunscreen	Dry/Sensitive
AM 4. Protect	Spot Light Sunscreen	Hint of Tint	Quiz goal = Anti-ageing
PM 2. Treat	5% Multi Peptide & HA	15% Vitamin C Serum	Pigmentation 60–75 + skin ≠ Sensitive
PM 2. Treat	5% Multi Peptide & HA	Repeat AM Hero	Single severe concern (one concern <50)
PM 3. Repair	Overnight Revive Crème	Moisture Cocoon	Dry skin

If user has 2+ active pigmentation concerns → **upgrade the recommendation to a Routine Set** (see §9).

7. The "Hero Serum" Decision Tree *(only fires inside §6.B Scan-Driven Routine)*

This is the **single most important product** in the routine — it's the pigmentation anchor. Used only when the scan flagged a pigmentation-family concern. Otherwise the Bestseller Fallback (§6.A) hard-codes Advanced Spot Targeting Serum.

IF Pigmentation <60 OR (quiz: priority = Fade pigmentation AND Pigmentation <70):
→ Advanced Spot Targeting Serum ★ hero (Asaya bestseller)

ELSE IF Post Acne Scars <70 AND skin type ∈ {Oily, Combination, Acne-prone}:
→ 10% Niacinamide & 1% Alpha Arbutin Serum

ELSE IF Pigmentation 60–80 AND skin type ∈ {Dry, Sensitive}:
→ 2% Kojic Acid & 1% Alpha Arbutin Serum (gentler actives)

ELSE IF Dark Circles <65 (primary concern):
→ 5% Multi Peptide Complex & HA Serum

ELSE IF Skin age > biological age + 2 OR Wrinkles <70:
→ Radiance Serum (Korean brightening)

ELSE: _____
→ Advanced Spot Targeting Serum (always-on brand fallback)

Pregnant users (from quiz): hero is always **Radiance Serum** (no Kojic Acid, no Salicylic Acid). Show the existing pregnancy care banner.

8. Beyond the Face — Single Product Slot

Every user gets exactly **one body product** card on screen 6, picked from the answer to the new quiz question (§3.A). One card → one decision → higher attach rate.

Quiz Answer	Recommended SKU	Headline	Subline
Dark underarms	Even Tone Underarm Mist	"For your dark underarms"	Asaya's #1 best-seller. Fades dark patches & controls odour.
Dark knees, neck & elbows	Tone Restore Knee-Neck-Elbow Cream	"For your knees, neck & elbows"	Targeted body pigmentation cream.
Bikini line & inner thighs	Face Forward (SKU TBC)	"For your bikini line & inner thighs"	Sensitive-zone brightening.
Just my face for now	Even Tone Underarm Mist (fallback)	"Asaya's #1 best-seller"	Try our bestselling body brightening spray.

Render position on screen 6:

Sit below the AM/PM routine cards, before the "Shop My Routine" CTA, with the section header: ✨

Beyond the Face — Asaya goes head-to-toe.

Card style:

Same **pc** card style as the face products, but with a small "BODY CARE" eyebrow label in gold instead of "Step X."

Why we don't show 3 random products:

We considered randomly picking 3 body SKUs but rejected it — it dilutes the decision and lowers attach rate. One targeted recommendation, tied to a user answer, will convert ~3× higher.

9. Set vs Individual SKUs — When to Bundle

A Routine Set always sits as the **primary CTA** on screen 6, because it's higher AOV and a cleaner decision. Pick the set based on the user's profile (scan + quiz):

User Profile (after scan + quiz)	Recommended Set
DEFAULT — no pigmentation concern flagged	Even Tone Restore Set (3-step beginner routine, on-brand fallback)
Pigmentation <60 (severe) + quiz priority = Fade pigmentation	Advanced Anti-Pigmentation Kit ★
Pigmentation <70 AND Post Acne Scars <70	3-Step Spot Diminishing Set
Pigmentation OR Scars flagged + body opt-in (underarm/knee)	Head to Toe Anti Pigmentation Set ★
Acne <60 + quiz priority = Reduce acne	Anti-Acne Set (then upsell pigmentation hero)
Quiz priority = Anti-ageing + Wrinkles flagged	Festive Glow Set
Quiz priority = Hydration + Hydration <60	Even Tone Restore Set
Single severe concern (one score <50)	Rapid Dark Spot Correction Set
Travel intent / first-time / wants minis	Travel Kit

Display logic: Show the set card as the primary CTA, with the same 4-step routine below labelled "Or build your own routine →".

10. Scoring & Ranking (When Multiple SKUs Qualify)

When more than one SKU could fill a slot, rank by:

```
final_score =
  0.40 * concernMatch    // does it solve the detected concern?
+ 0.20 * skinTypeMatch   // skin-type compatibility (binary, 0 or 1)
+ 0.15 * hyperpigBoost   // +15 if SKU sits in the Hyperpigmentation collection
+ 0.10 * bestSellerBoost // +10 if marked "best seller" (Underarm Mist, Spot Targeting)
+ 0.10 * priceFit        // user's stated budget vs SRP
+ 0.05 * noveltyBoost    // newly launched SKUs
```

Min display threshold: **60/100**. If no SKU clears 60 for a slot, hide the slot (don't show a weak rec).

11. Screen 6 (Routine) — UI Specification

Every product card must show:

1. Step number + role (Cleanse / Treat / Moisturize / Protect) — or "BODY CARE" for the Beyond the Face slot
2. Product name
3. Why it was picked — *one sentence tied to the user's scan or quiz answer* (e.g., "Picked because

Pigmentation scored 35/100 on your scan." or "You said dark underarms are your top body concern.")

4. Price + Shop Now button (Shopify add-to-cart)

12. Data Pipeline / Tech Requirements

Layer	Owner	What needs to happen
Product catalog	Asaya	Maintain master sheet (this one) as source of truth. Add <code>hyperpig_collection_member</code> (Y/N), <code>best_seller</code> (Y/N), <code>actives</code> (comma list), <code>srp_inr</code> , <code>shopify_handle</code> .
Skin-type tags	Asaya	Already done in spreadsheet. Push to <code>metafields</code> on Shopify so engine can read at runtime.
API contract	GlamAR	<code>GET /asaya/recommendations?scan_id=...&quiz=...</code> returns: <code>{ set: {...}, am_routine: [...], pm_routine: [...], body_extras: [...] }</code> .
Fallback rules	GlamAR	If catalog API is down, ship the demo with hardcoded JSON of the 4-step default routine.
Analytics	Asaya + GlamAR	Track: set CTR, individual product CTR, total cart value when routine is added, drop-off between screen 6 and checkout.

13. Out of Scope (v1)

- Real-time inventory check (assume in stock; show out-of-stock state from Shopify on click)
- User account history / repeat-customer logic
- Multi-language / international SKU swaps
- Doctor-in-loop validation (the pregnancy banner is the only safety overlay)

14. Open Questions for Asaya

1. **"Face Forward"** for inner thigh / bikini line — confirm exact SKU name + Shopify handle. Not yet in the master sheet.
2. Confirm "best seller" tags — are **Even Tone Underarm Mist** and **Advanced Spot Targeting Serum** the official top two we should anchor the fallback routine on?
3. **Default fallback set** — agree that the **Even Tone Restore Set** is the right "no concerns detected" default? Or should it be **3-Step Spot Diminishing Set** (more aggressive sell)?
4. Budget bands — should we offer a "*value routine*" (3 products under ₹2,500) vs "*complete routine*" (4-step ₹4,500+)?
5. For pregnant users — is **Radiance Serum** confirmed pregnancy-safe by the Asaya formulation team?

6. **Set bundling pricing** — when we recommend a set vs individual products, what's the discount delta we can surface as "Save ₹X with the set"?
 7. **Melasma confidence** — GlamAR does NOT detect melasma directly. We infer it from quiz response ("dark patches on cheeks"). Comfortable with this, or should we wait until GlamAR ships a melasma classifier?
-

15. Success Metrics

- $\geq 35\%$ of users on screen 6 click "Shop My Routine" or "Add Set to Cart"
- $\geq 15\%$ conversion from screen 6 to checkout
- Average order value $\geq ₹3,500$ (vs ₹1,800 baseline on browse traffic)
- **"Beyond the Face" body card attach rate $\geq 25\%$** (always shown, single SKU, one-click add)
- **Quiz completion rate $\geq 80\%$** — adding one extra question (Beyond the Face) must not tank completion. Monitor drop-off on Q6.
